

Cornus florida

Flowering Dogwood

A beautiful small tree. Lovely white flowers in the spring, before the leaves, bright red fruit, great fall color, and distinctive, horizontal branching structure. Requires a moist, acidic soil with plenty of organic material to really thrive. Part shade is ideal. Many cultivars are commercially available. Unfortunately, a fungal disease, anthracnose, has damaged and killed many dogwoods in the Eastern U.S., and may well find its way west.

Suggested companions: oaks (*Quercus* sp.), hickories (*Carya* sp.), Pennsylvania sedge (*Carex pensylvanica*), wild geranium (*Geranium maculatum*) and ferns.

Plant Type: Small Tree
Size: 15-40' H
20-30' W

Water Tolerant: No

Habitat:
Woodland Margin
Forested Upland

Soil: Average Garden Soil
Rich Moist

Exposure: filtered
shade

Flower Color:
White

Plant in: Spring

Groundcover: No

Bloom Time:
May
June

Other Attributes:
Bird attracting
Wildlife attracting
Fall color
Butterfly attracting
Winter interest
